

# Making mapping accessible with a low-cost, DIY drone

Dan Joseph

GEOG 596A, Spring 2, 2017

Dr. James O'Brien (advisor)

A **DRONE** by any other  
name...

What **USE** is a drone?

# Hobbyist & commercial

- Cinematography
- Racing
- Monitoring agriculture
- Rail line inspection
- Real estate marketing
- Volume measurement for stockpiles or holes
- Utility line or pipeline inspection
- Commercial cargo delivery?

# Humanitarian

- Mapping (response, resilience, development)
- Media communications
- Cargo delivery (health, emergency essentials)
- Environmental monitoring
- Land rights/ tenure/ documentation

Opportunity in DIY

Document, in a manner that allows others to learn from, replicate, and improve, the process of building a transportable, fixed-wing drone for imagery acquisition and mapping with a digital camera.

# Project scope

yes

- Complete DIY walkthrough
- Accessible
- Open source
- Orthophoto output

no

- Airframe optimization
- Survey-grade accuracy
- Special sensors
- Legal or ethical aspects

Project deliverable:  
Walkthrough

# Supplies and equipment

Airframe construction

# Setup of electronics

# Automated flight

**OpenDroneMap**

**POSM**

Image processing

The screenshot displays the OpenAerialMap web interface. The main area shows a high-resolution aerial photograph of a farm area, identified as 'Barangay Lanawan (farm), Mac...'. The map is surrounded by a dense green forest. The interface includes a search bar at the top left, navigation controls (compass, zoom in/out, and a home button), and a world map inset in the bottom left corner. On the right side, a metadata panel provides details about the selected area, including a thumbnail, a download link, and technical specifications.
