Parameters Environments

* Input LAS Dataset

* Output Raster

Value Field
Elevation

Interpolation Type
Binning

Cell Assignment
Average

Void Fill Method
Linear

Output Data Type
Floating Point

Sampling Type
Cell Size

Sampling Value
10

Z Factor
1

Parameters Environments

* Input raster

* Reclass field

* Reclassification

Reverse New Values

Start	End	New

Classify Unique

* Output raster

Change missing values to NoData

Parameters Environments

* Input raster

Field

* Output polygon features

Simplify polygons

Create multipart features

Maximum vertices per polygon feature

Parameters Environments

* Input Raster or Feature Zone Data

* Zone Field

* Input Value Raster

* Output Raster

Statistics Type
Mean

Calculate Circular Statistics

Ignore NoData in Calculations

Process as Multidimensional

Parameters Environments

* Input surface raster

* Output surface raster

Project Timeline

- ▶ Acquire Data: Done
- ▶ Test Methodology: Ongoing, anticipated finish date of 10/18/2023
- ▶ Expand Methodology to larger Study Area: Complete before GEOG-596B Spring Starts 01/03/2024
- ▶ Create Tool: 01/03/2024 – 02/02/2024
- ▶ Complete Final Research Paper: Complete by end of GEOG-596B 03/13/2024
