AGENDA

BACKGROUND

OBJECTIVES

STUDY AREA

WORKFLOW

ANTICIPATED RESULTS and
DELIVERABLES

PROJECT TIMELINE

BACKGROUND

STEP-UP TRANSFORMER

Increase voltage and reduce current

STEP-DOWN TRANSFORMER

Reduces voltage before reaching end-user

Source : <https://www.servostabilizer.org.in/what-is-step-down-transformer/>

BACKGROUND

transformer load analysis

Analyze transformer consumption data against transformer capacity

OVERSIZED TRANSFORMER

- Excess fuel costs to the utility = \$\$

UNDERSIZED TRANSFORMER

- Life of the transformer is reduced
- Causes system outages
- Requires replacement = \$\$\$\$

BACKGROUND

electric meters

ANALOG ELECTRICITY METER

Energy consumption is collected manually on a monthly basis by a meter reader.

SMART METER

Utility can read, start, and stop services remotely.

Advanced Metering Infrastructure (AMI)

Smart meters record and transmit energy consumption to the utility throughout the day via a secure wireless network

BACKGROUND

Technology Limitations Stated in Literature	Work
Cost of software and other components, requires investment in hardware and IT equipment	Ashkezari, et al. (2018)
Requires frequent data collection resulting in protocol errors and bandwidth constraints	Balakrishna & Swarup (2020)
Consolidation of big data was a time-consuming task	Guerrero-Prado, et al. (2020)
Large volumes of data lead to increased potential of data errors and confusion	Lo, Huang & Lu (2014)
Requires robust methods for managing big data and quality models	Peppanen, et al. (2015)
Big Data challenge is efficiently managing data flows	Peppanen, et al. (2016)
Hardware and software limitations exist; storing and managing data	Triplett, Rinell & Foote (2010)

Table 1. Technologies and their limitations used to incorporate Advanced Metering Infrastructure (AMI) data within a GIS.

OBJECTIVES

comparative analysis

Determine if distribution engineering design standards used are still valid based on actual customer usage within areas of single-family residence.

spatial analysis

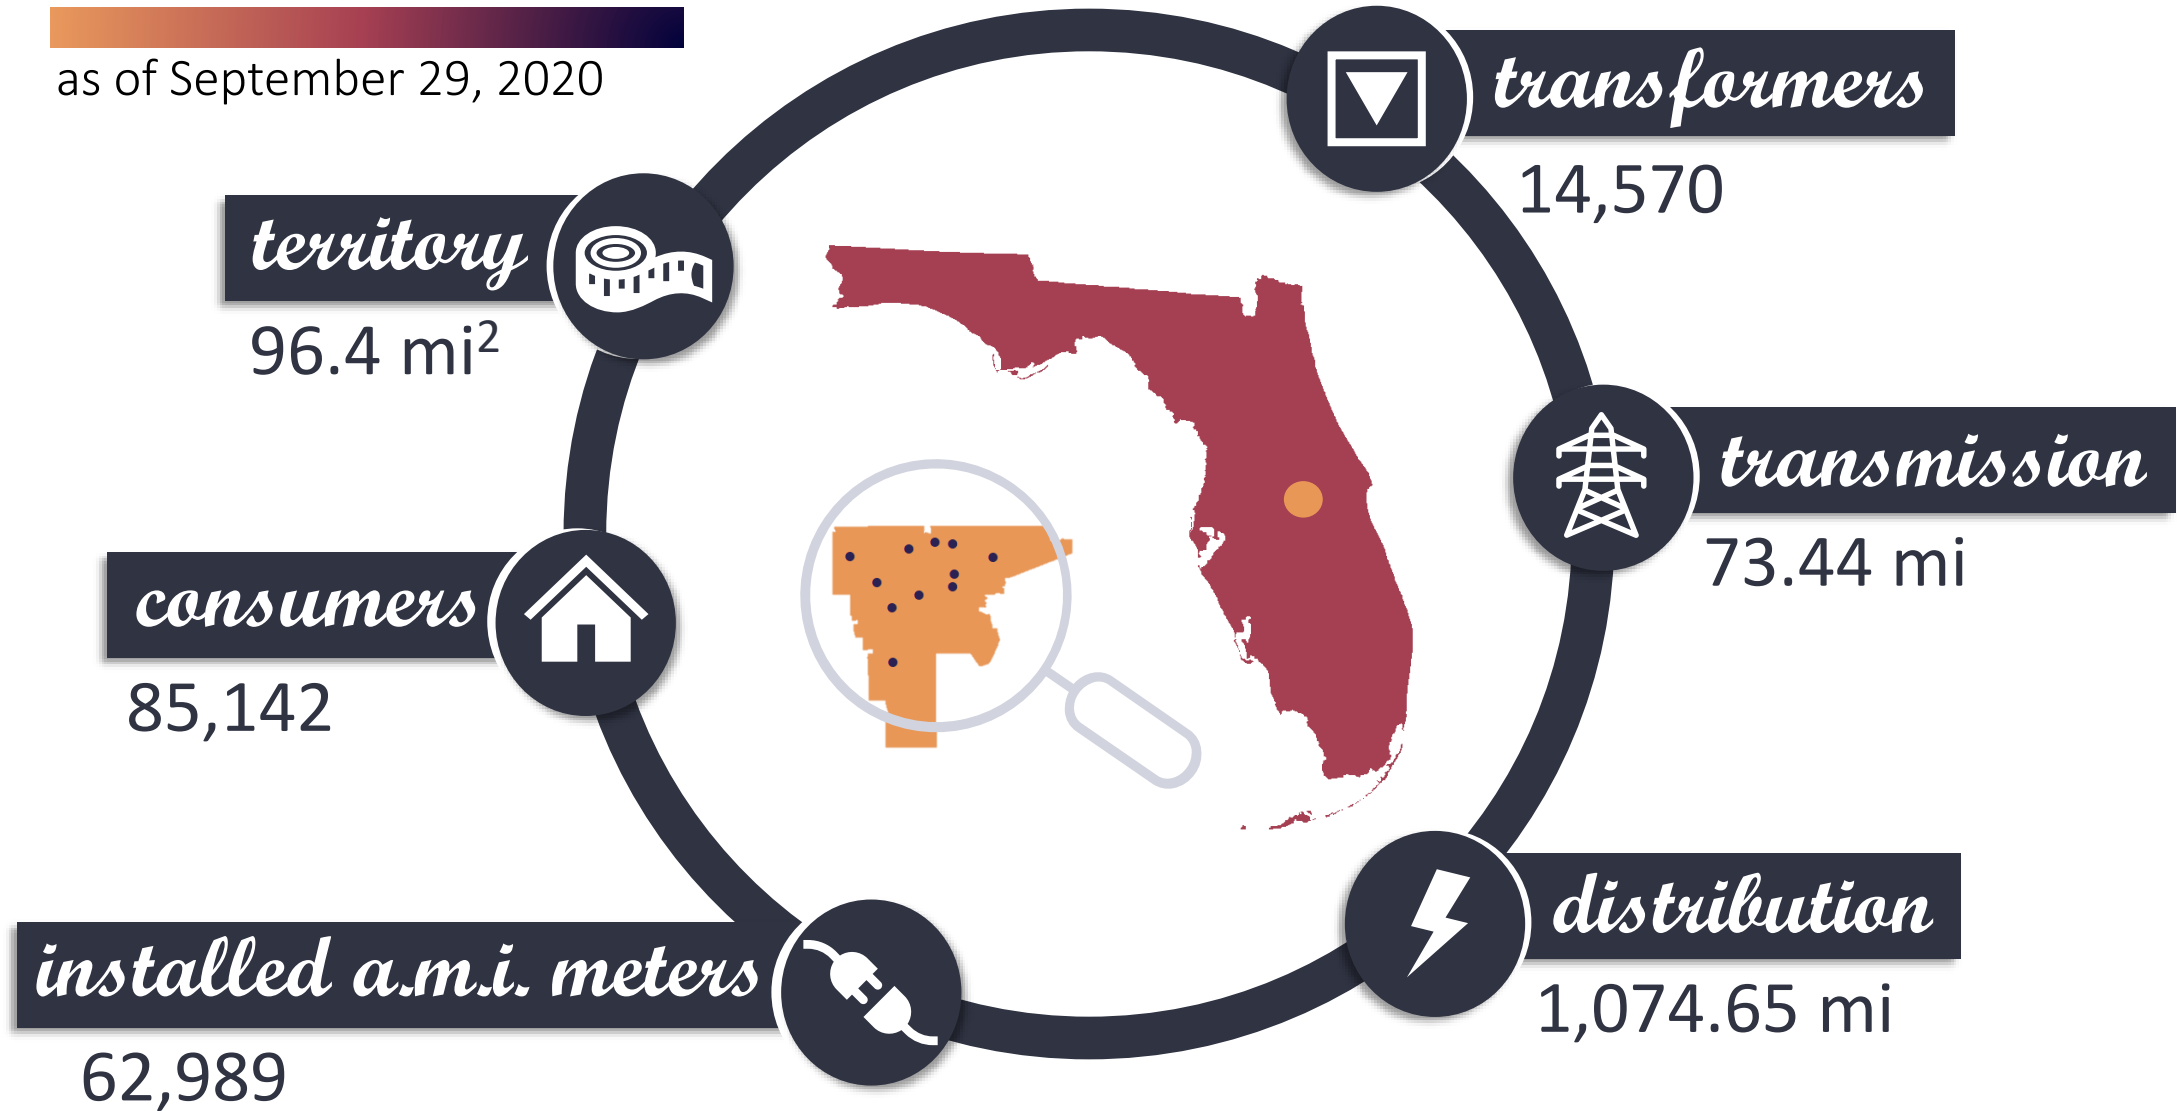

Improve criteria used when placing an appropriately sized transformer.

custom application

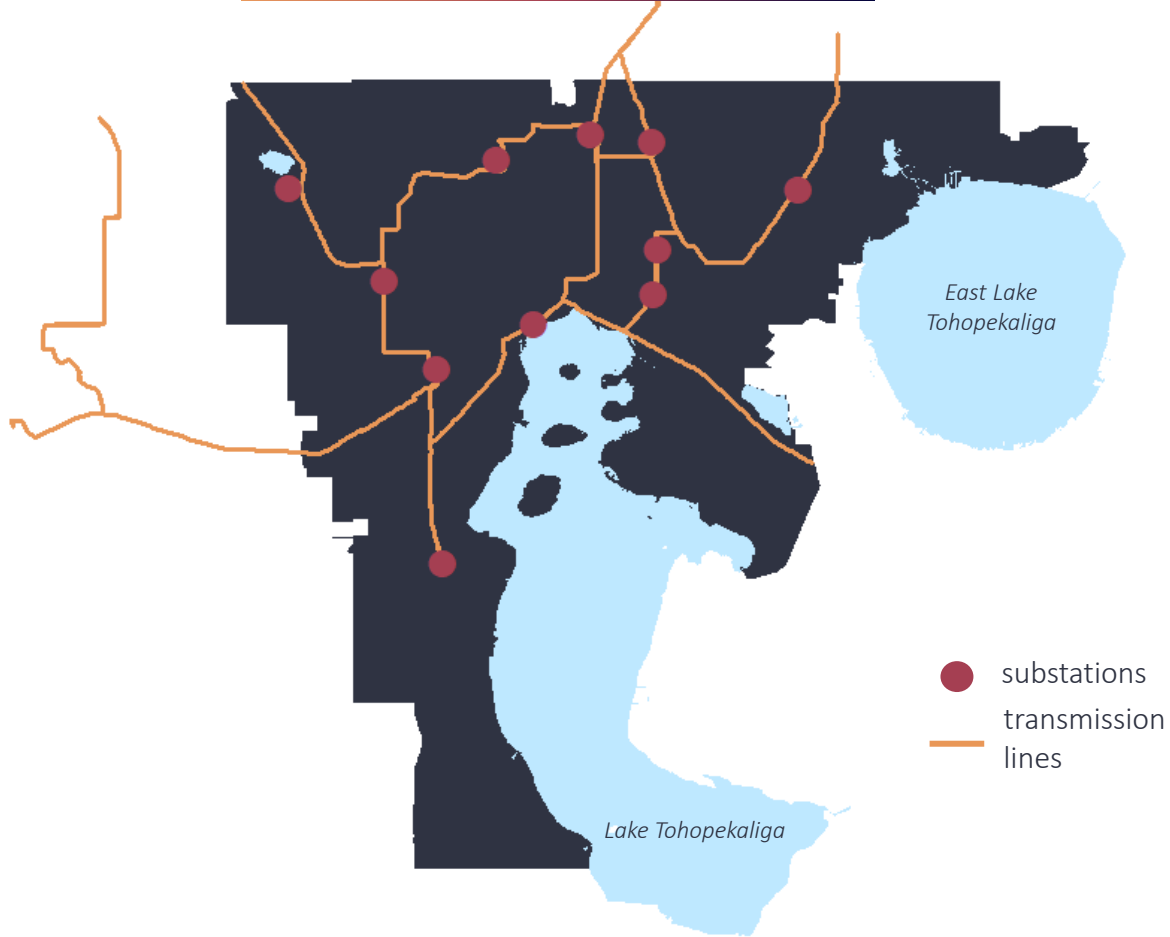

Aid our engineers in identifying areas which may require electric reconstruction to avoid future power-related issues.

CURRENT SYSTEM

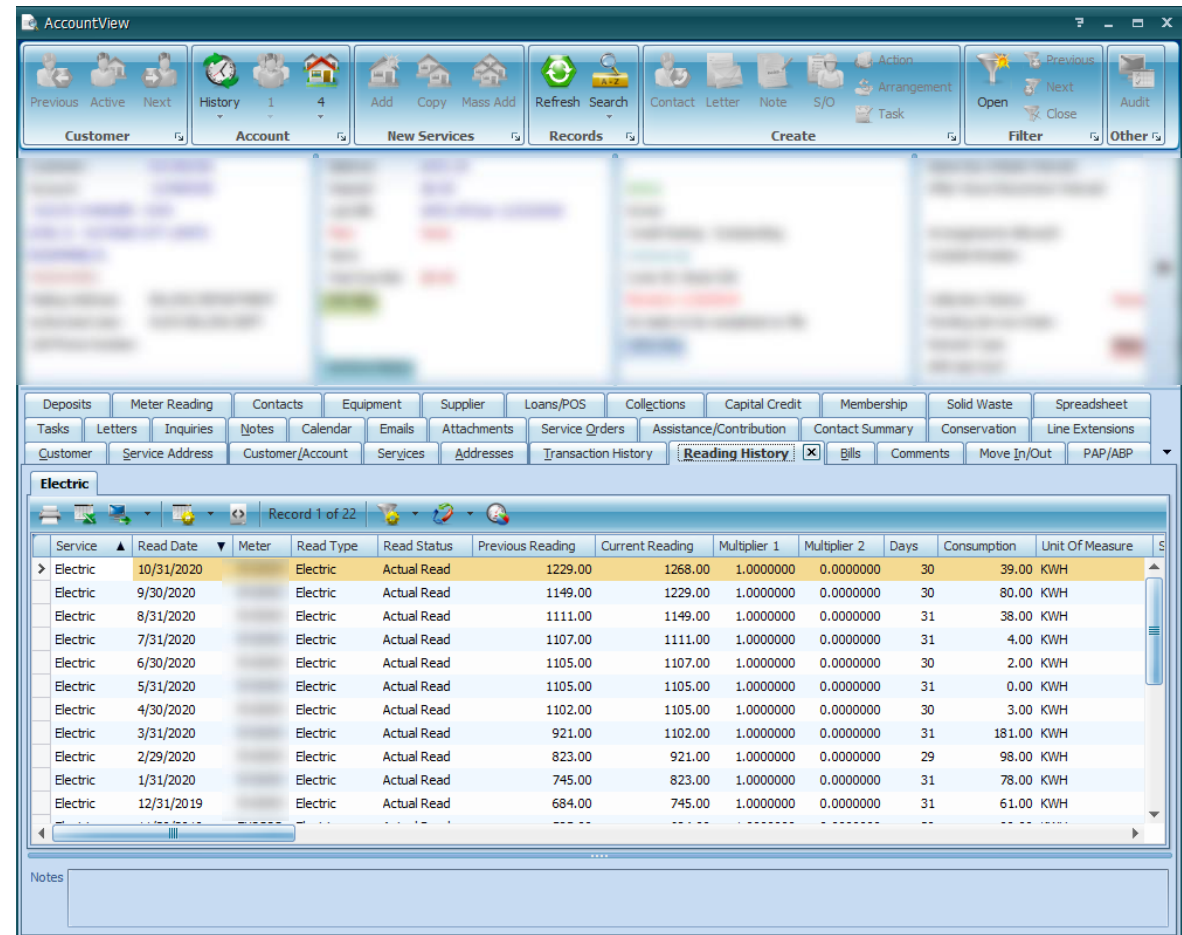

GIS

CURRENT SYSTEM

CIS (Customer Information & Billing Software)

The screenshot displays the AccountView software interface. The top section contains a toolbar with various icons for navigation and actions. Below the toolbar is a main content area with a grid of data. The data is organized into a table with columns for Service, Read Date, Meter, Read Type, Read Status, Previous Reading, Current Reading, Multiplier 1, Multiplier 2, Days, Consumption, and Unit Of Measure. The table shows a list of electric meter readings for the year 2020, with the most recent reading on 10/31/2020.

Service	Read Date	Meter	Read Type	Read Status	Previous Reading	Current Reading	Multiplier 1	Multiplier 2	Days	Consumption	Unit Of Measure
Electric	10/31/2020		Electric	Actual Read	1229.00	1268.00	1.0000000	0.0000000	30	39.00	KWH
Electric	9/30/2020		Electric	Actual Read	1149.00	1229.00	1.0000000	0.0000000	30	80.00	KWH
Electric	8/31/2020		Electric	Actual Read	1111.00	1149.00	1.0000000	0.0000000	31	38.00	KWH
Electric	7/31/2020		Electric	Actual Read	1107.00	1111.00	1.0000000	0.0000000	31	4.00	KWH
Electric	6/30/2020		Electric	Actual Read	1105.00	1107.00	1.0000000	0.0000000	30	2.00	KWH
Electric	5/31/2020		Electric	Actual Read	1105.00	1105.00	1.0000000	0.0000000	31	0.00	KWH
Electric	4/30/2020		Electric	Actual Read	1102.00	1105.00	1.0000000	0.0000000	30	3.00	KWH
Electric	3/31/2020		Electric	Actual Read	921.00	1102.00	1.0000000	0.0000000	31	181.00	KWH
Electric	2/29/2020		Electric	Actual Read	823.00	921.00	1.0000000	0.0000000	29	98.00	KWH
Electric	1/31/2020		Electric	Actual Read	745.00	823.00	1.0000000	0.0000000	31	78.00	KWH
Electric	12/31/2019		Electric	Actual Read	684.00	745.00	1.0000000	0.0000000	31	61.00	KWH

WORKFLOW

connect AMI peak data to consumer feature class in GIS

1

populate summarized AMI data within transformer feature class

Join MDMS extract data to Consumer

Populate data from joined Consumer into Service Points

Attributes	
Service Point	
Standard Service Point	
Consumer	
246500	
246520	
Object ID	23305
SubtypeCD	Electric Account
Account Number	246500
Service Point Object ID	332
Full Account Number	000246500
Full Address	<Null>
Phase Designation	<Null>
ServicePoint_GlobalID	{3A021AFB-FB10-4B3B-E
Generation_GlobalID	<Null>
CON_NUMBER	246500

Consumer to Service Point relationship

Copy Linked Record

Updates an attribute of a feature with a value from a related table.

To configure this method, populate the following in the DynamicValue table:

Table Name	Field Name	Value Method	Value Info
Feature class to which value will be copied to from the source or related table	Field to store the copied value	COPY_LINKED_RECORD	Source Source Field Primary Key Foreign Key

Attribute Assistant's Copy Linked Record function

WORKFLOW

2 populate summarized AMI data within transformer feature class

```

1 ["List", "of", "transformers"]
2
3 Loop through list, for each transformer:
4   Make Feature Layer tool of single transformer to be used as Flag
5   Trace Geometric Network tool (result: all service points downstream are selected):
6     Flags - as created above | Trace Task Type - TRACE_DOWNSTREAM | Disable unneeded feature classes from trace
7   Copy Features tool to create feature class of all downstream service points
8   Summary Statistics tool to sum all peak data
9   Update Cursor to populate transformer with peak data sum

```

Pseudocode to populate peak data within transformer feature class

```

...for _mod.use_z = True

```

```

...selection at the end -add
..._ob.select= 1
..._ob.select=1
...context.scene.objects.active
...("Selected" + str(modifier_
...mirror_ob.select = 0
...= bpy.context.selected_object
...data.objects[one.name].select
